

Short CV of Stergios Papadimitriou

Stergios Papadimitriou owned diploma of Computer Engineering and Informatics from the Patras University, Dept of Computer Engineering and Informatics in 1990. He performed also a PhD on Computer Engineering at the same institute during 1990-1996. The subject of his PhD is: *"Synchronization and Control of non linear dynamical systems and their applications on information encryption and compression."*

He worked on many research projects and performed research mainly at the areas of Biomedical engineering and bio-informatics.

From 2002 he works as a professor at the Technological Education Institute of Eastern Macedonia and Thraki. He is a full professor from 2006. At his research work there are currently (2015) 53 publications at the Scopus database with 303 citations and 11 h-index.

During the recent years he develops the open source scientific programming environments ScalaLab and GroovyLab. Also, he performs research on Bioinformatics, scientific computing, computational intelligence, operating systems and parallel computation mainly with using GPU devices. At the Informatics and Computer Engineering department he teaches the courses: *Operating Systems, Compilers, Network Programming and Bioinformatics.*
