

Digital Product School (DPS) is a three-month full-time training program created by [UnternehmerTUM GmbH](#). About 100 **Product Managers, Interaction Designers, Software Engineers** and **Artificial Intelligence Specialists** per year have the possibility to develop unique digital products in interdisciplinary teams. It is comparable with an internship.

In September 2017 our next batch starts and interested students can apply through our website:

<http://digitalproductschool.io>

As we made a great and instructive experience with our first and very successful batch we now want to give new students the opportunity to gain intensive practical experience in the digital domain. **The goal for all teams is to develop a prototype for a digital product which solves a real customer problem.**

To guarantee a prosperous outcome we offer a free participation at the program and additionally support the participants with at least **750 EUR** per month in grants. Also we enable access to the **local start-up and tech scene**. Interested parties can apply for the second Batch through our website.

We would be very happy to meet your students soon in the campus located on the 25th floor of the Highlight Towers in the north of Munich, the **IBM Watson IoT Center**.

You also can find some insights on our channel on [Facebook](#) & [Twitter](#) or see our meetups "[Product Leaks](#)" and "[Data Brain](#)"!

Thank you very much for forwarding this information to your students!

Kind regards,
Bastian Rieder
